# Shopify Integration Scope Change Instructions

These instructions will walk you through setting the scope for **read_location** to **read only** so that the **Shopify Integration** can resume normal functionality.
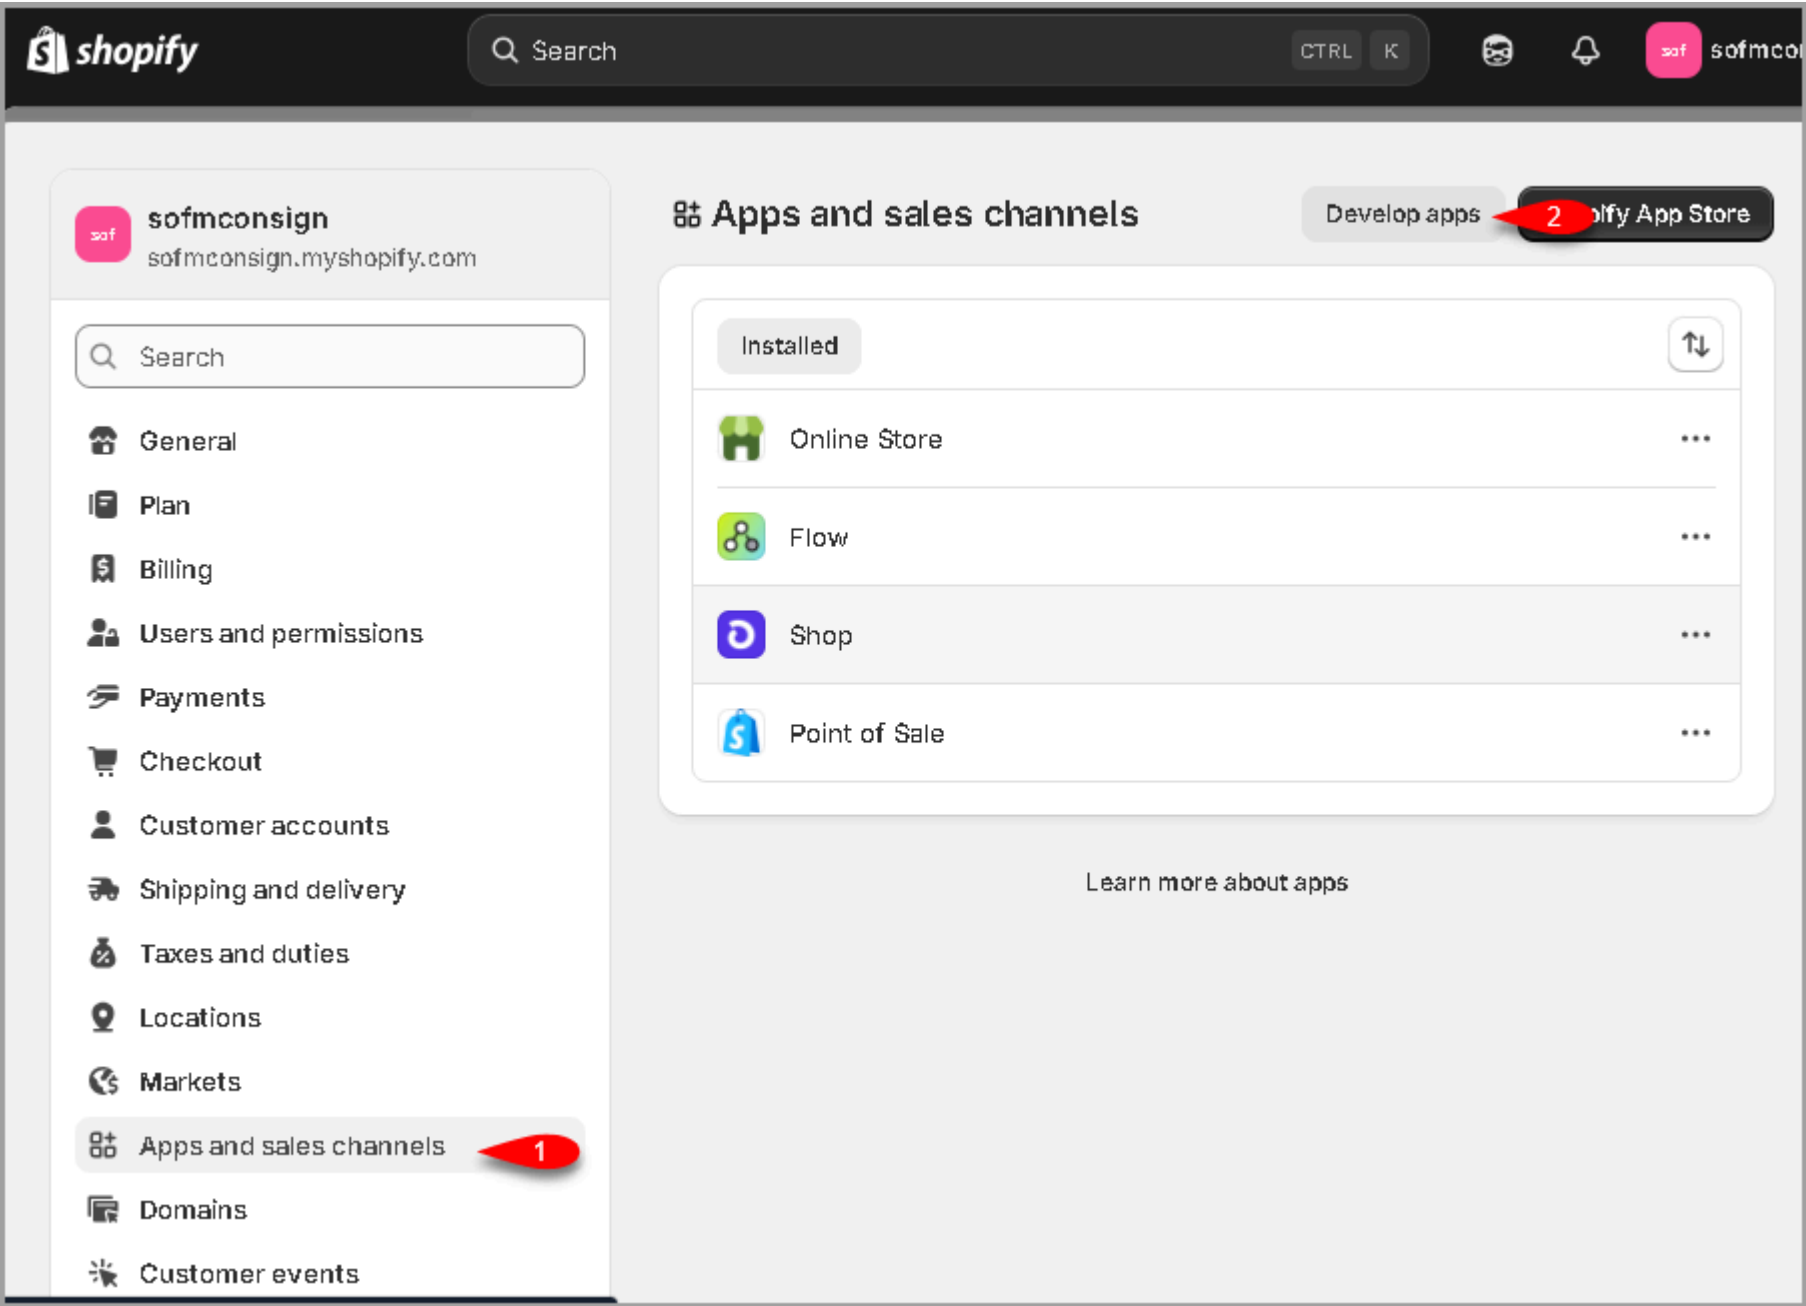

1. Go to **admin.shopify.com** and sign in.

2. Click on the **Settings** at the bottom of the **Shopify** menu.
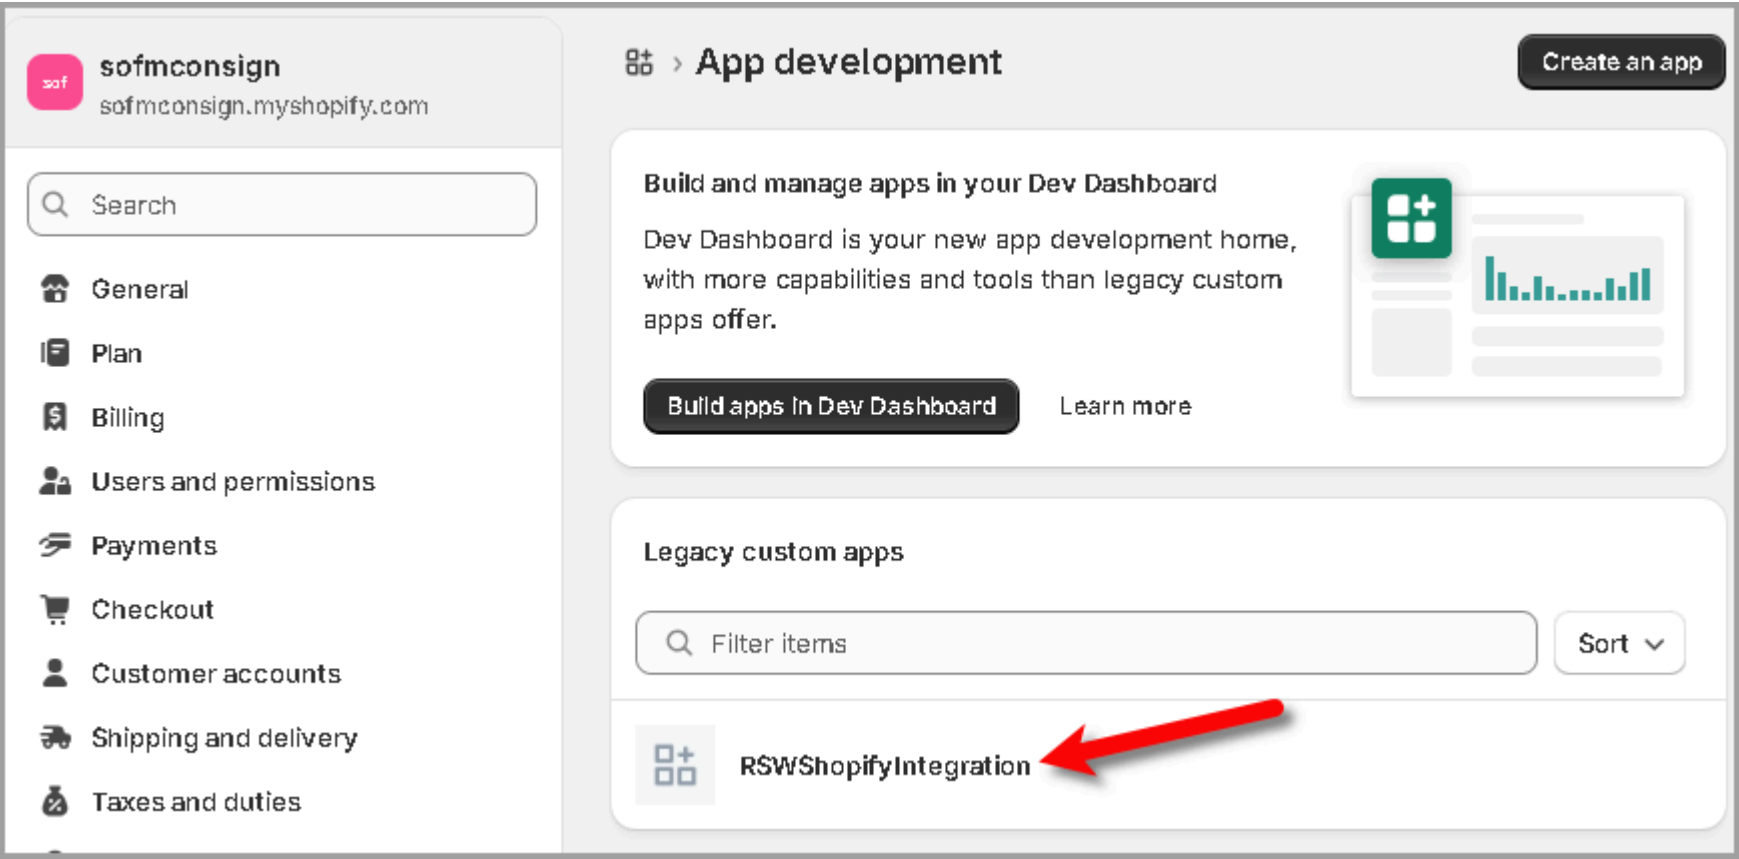

3. Click on **Apps and sales channels** and then click on **Develop apps** button.

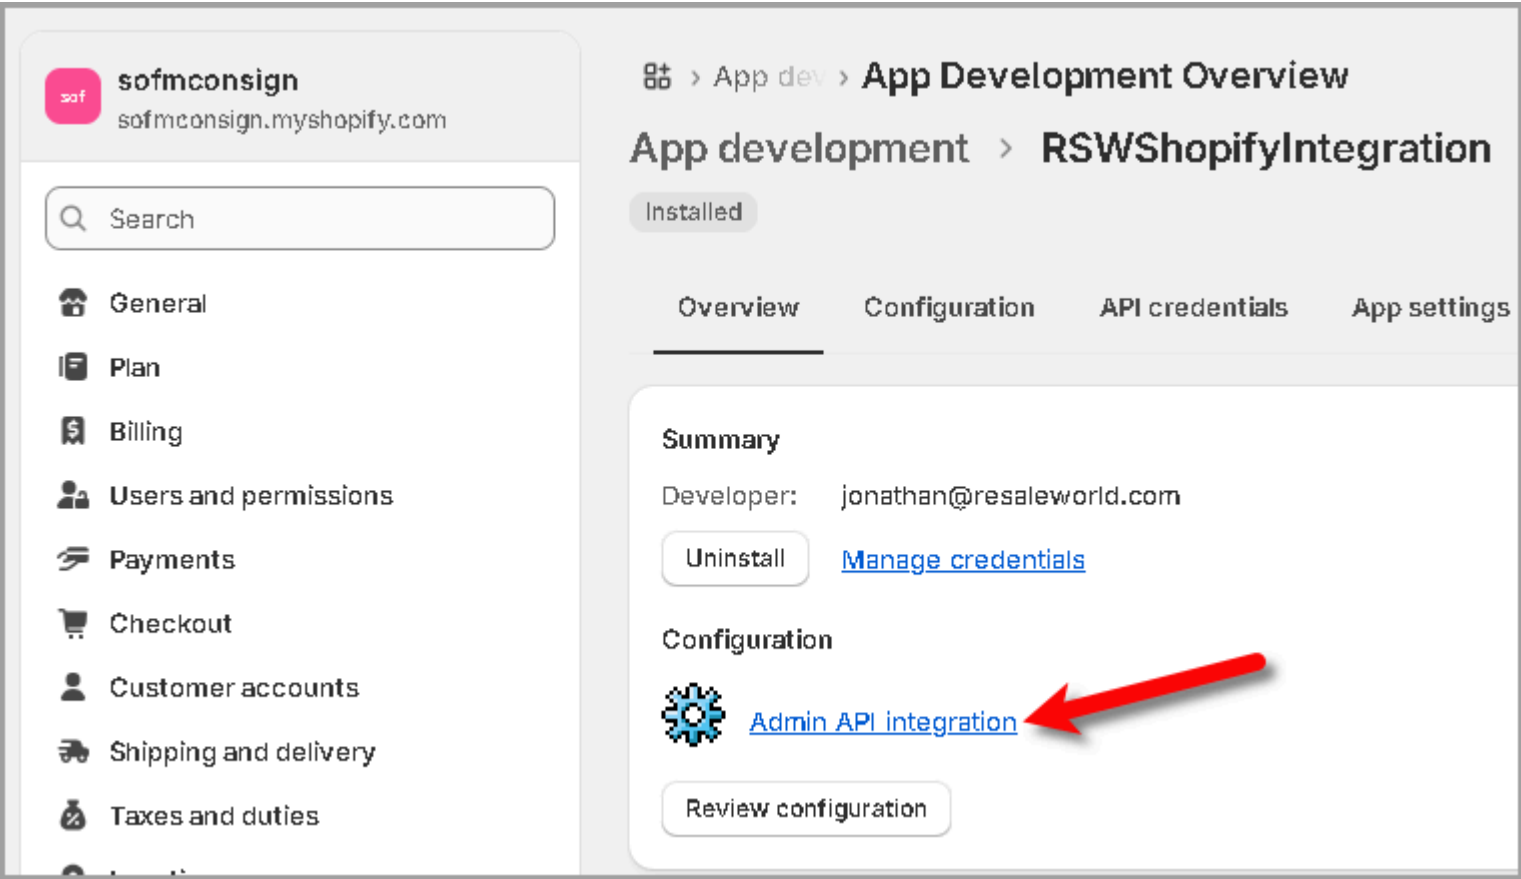

4. Click on the **Shopify Integration** link that is under custom apps.

   Note: This app may be called something different. This could also be located in a different area on this page but overall, it's a matter of finding and opening the app.
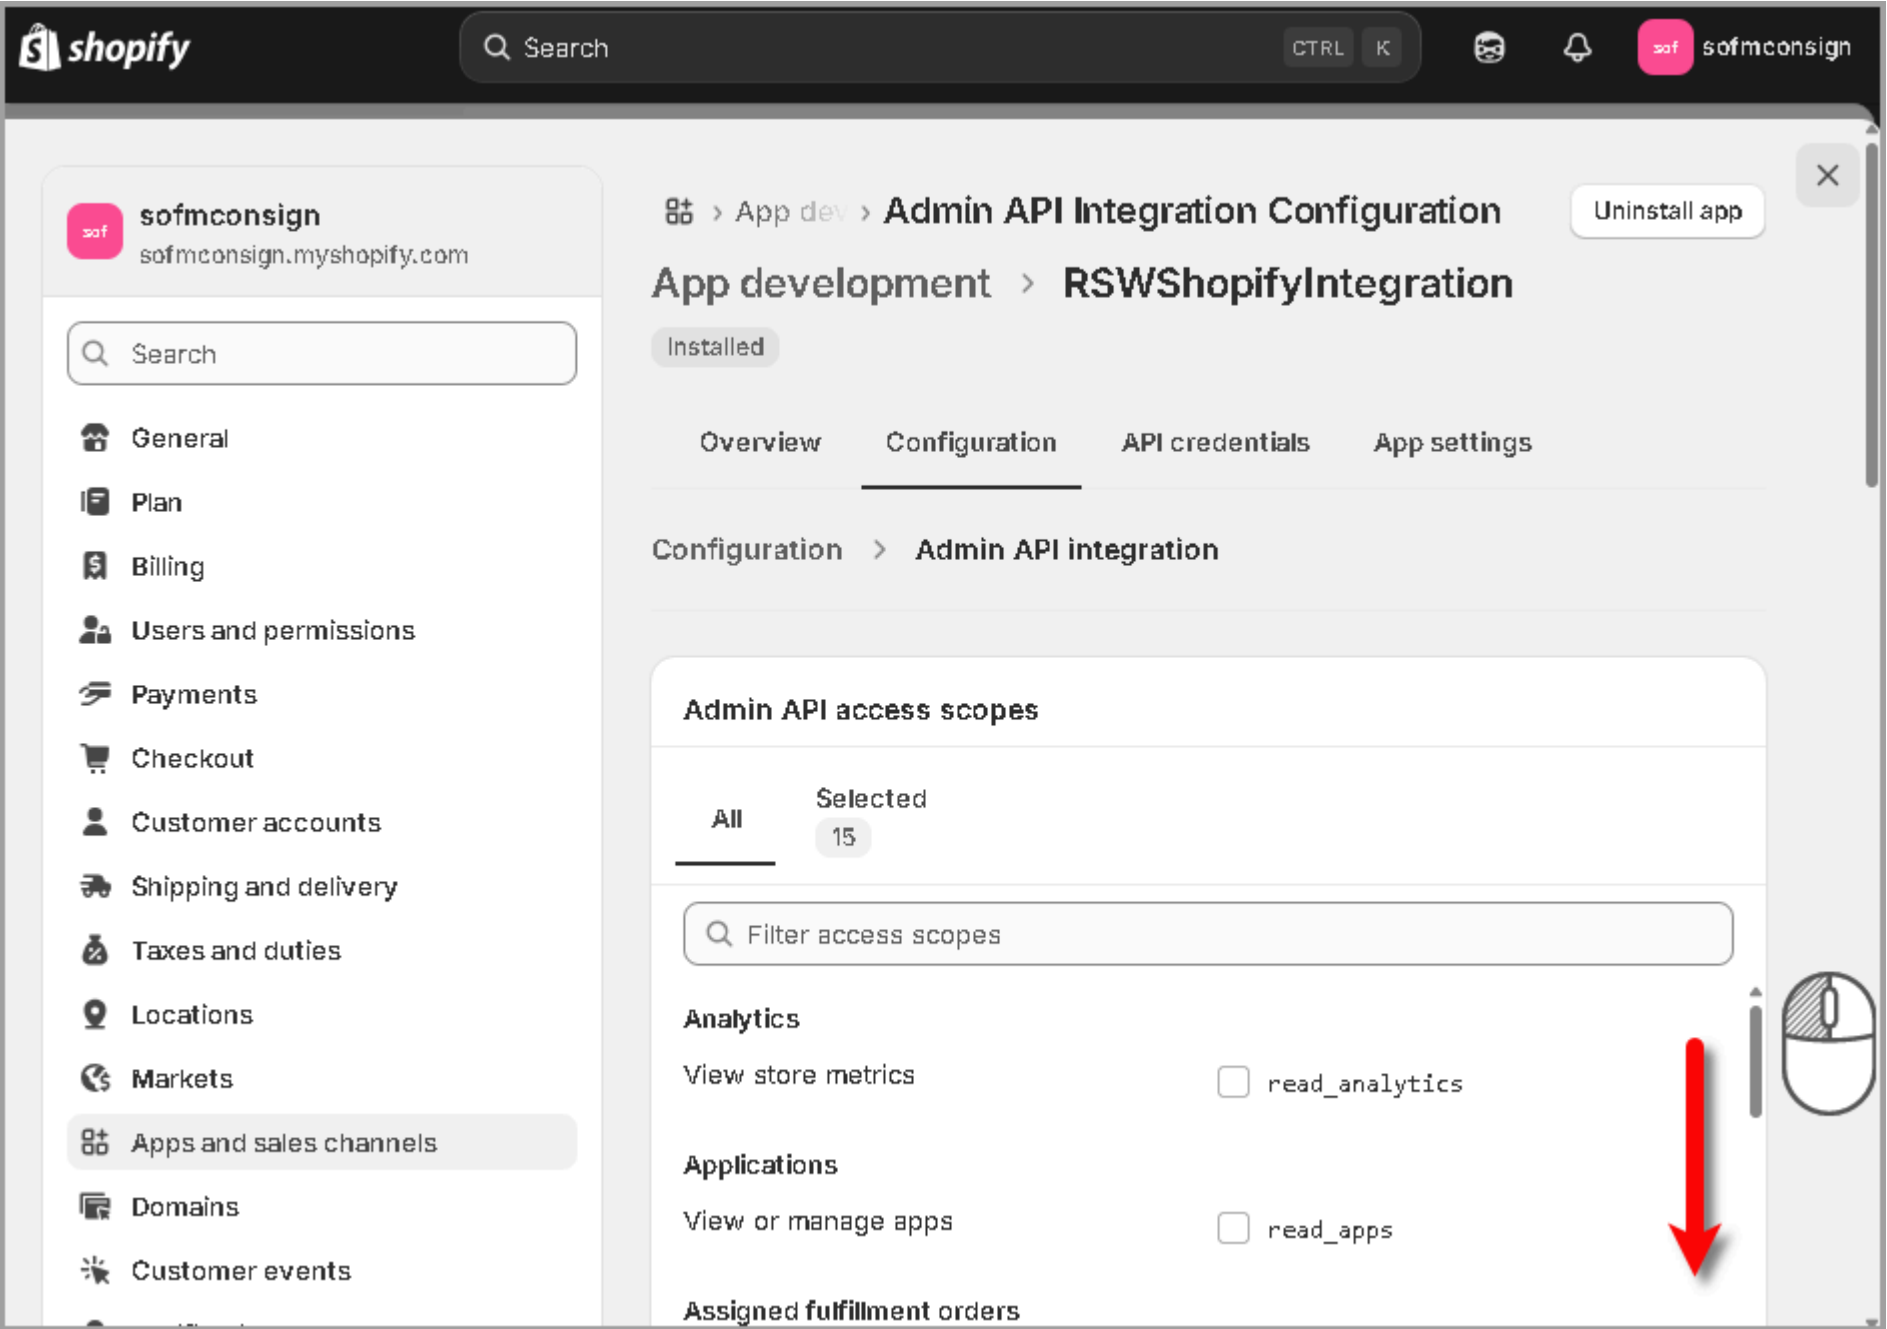

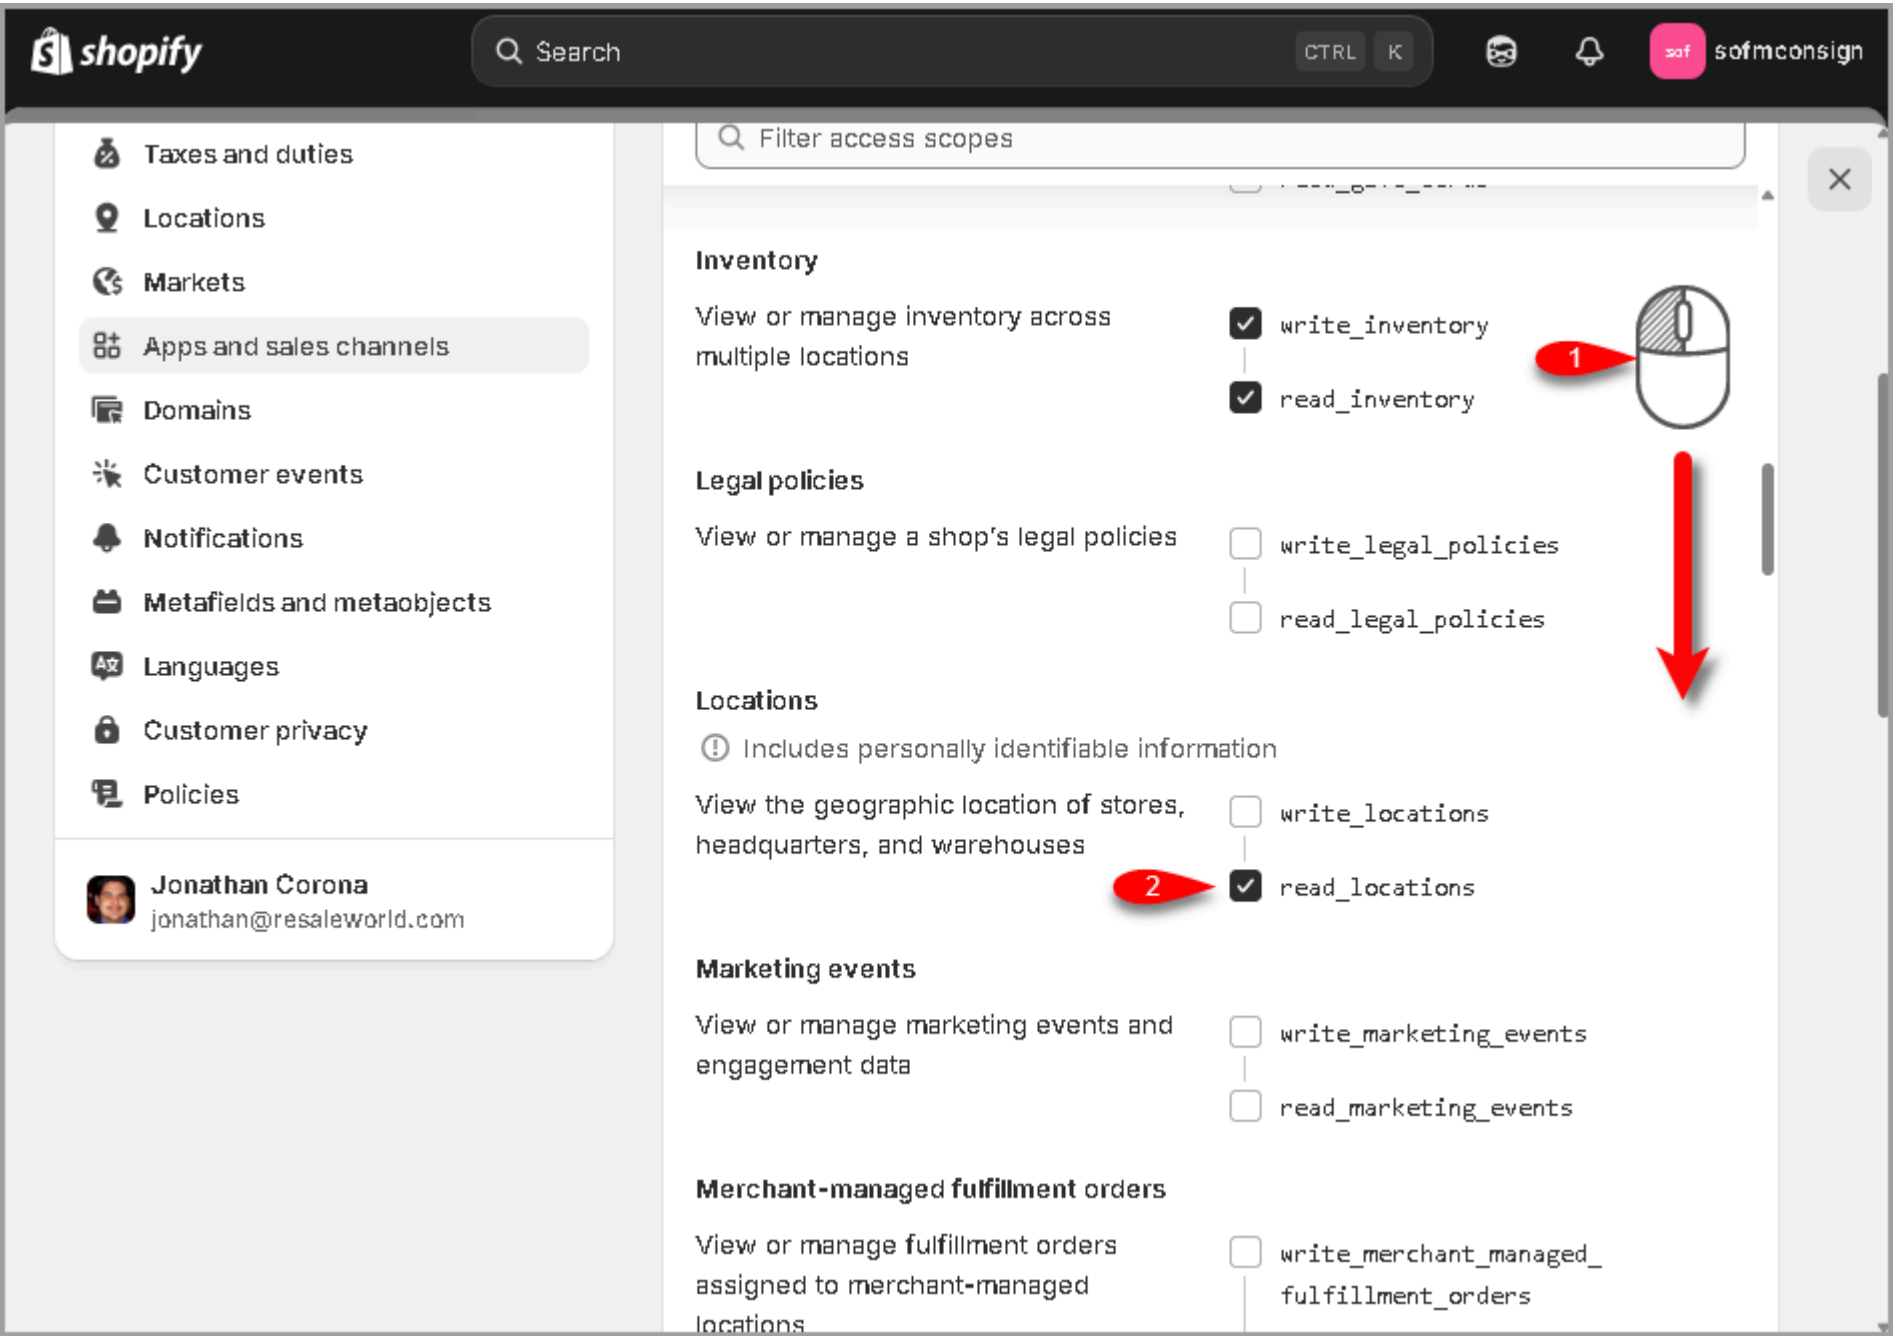

5. Click on **Admin API Integration.**

6. Scroll downwards on the right most scroll bar until you can see the **Admin API Access Scopes** clearly.
   Shortcut: In the Filter access scopes bar field, you can type Location to quickly jump to the setting we need to change.

7. Scroll down on the inner bar and until you see **Locations** and then checkmark **read_locations.**

8. Scroll back up to the top of the page and then click on the **Save** button.

Your Shopify sync should resume normal operation.
